QUESTEK AUSTRALIA PTY. LTD

ESTABLISHED IN 1980, QUESTEK BEGAN AS A SMALL SPECIALISED

electronic engineering firm, producing Electronic Scoreboards for small and large sporting complexes, and a range of products for the Television and Healthcare industries. Over the last decade, Questek has refocused its product line, creating the most innovative Nurse Call and Dementia monitoring systems on the market, while maintaining its position as leader in the field of Electronic Sports Scoreboards. Today, Questek have distributors Australia wide, and with over 20 staff in their Sydney office, Questek is striving to provide a new range of Nurse Call products to both the Australian and International markets. In 2004, as the result of an independent survey across the Aged Care industry, Questek was recognised as the number one Nurse Call provider to the Aged Care Industry. Questek recently applied this expertise at the Sherwood Road Nursing Home, Port Macquarie. This state of the art facility is perfectly complemented by Questek's innovative range of Healthcare communication products.

For the Sherwood Road Nursing Home, Questek installed their CareView range, integrating QuesCall digital nurse call system, Vigil dementia monitoring, QuesSoft clinical documentation, and QuesPage radio paging network. Questek also employed a range of security solutions such as QuesGuard personal alarm, QuesVision MATV systems, and QuesSecurity, incorporating access control, fire control and CCTV.

The Questek CareView integrated platform provides a comprehensive system that is at once clear, familiar, and easy for staff to use. Questek's

Careview range provides specialised care for the combination of low care, high care and dementia care needs of the Sherwood Road Nursing Home, with a plethora of added safety and comfort benefits.

Questek are pioneers and leaders in Electronic Dementia Management, developing and installing the first Dementia Monitoring System in conjunction with Alzheimer's Education Australia in 1993. Questek's current Vigil system provides comprehensive, individualised care to dementia sufferers.

QuesPage incorporates a full duplex speech system, allowing residents to have two way speech communication with the staff assigned to their care, revolutionising communication in health and aged care facilities. Carers can communicate from any location using their DECT telephones, reducing staff traffic and increasing staff flexibility and efficiency in the provision of care.

An added beneficial aspect of Questek's CareView system, as implemented at the Sherwood Road Nursing Home, is the integration between the nurse call system and QuesSoft clinical documentation software. CareView allows staff to report all events using a touch screen terminal, reducing the need for hand written documentation. CareView also provides for objective quality measurement against baseline criteria, ensuring continuous improvement in any facility. CareView will help you most efficiently maintain the complete and correct documentation necessary to justify optimum funding, giving you more time to spend on quality care.

Mr. Bart Williams, General Manager of Questek Australia, says, "At present, there is no other system with the flexibility or the power of CareView. Innovative products and our customer oriented philosophy distinguish Questek from the competition. We are progressing towards the future with our clients in mind."
