

# STANE INDUSTRIES

AND ALUCOBOND EQUALS EXCELLENCE

TEXT: MICHAEL BROWN PHOTOGRAPHY: ANDY STEVENS AND CORDUKES

→ STANE INDUSTRIES PTY LTD HAS OVER 18 YEARS experience in the building and construction industry. The Trivett Classic Porsche showroom was a project that demanded a level of quality that only a company with the expertise of Stane Industries could deliver.

This level of quality comes with experience, know how and planning. Working closely with the architects meant Stane Industries was able to fulfil the architects' design intent.

The Trivett Classic Porsche showroom project was co designed and constructed by Cordukes Construction, Collard Architects and Stane Industries within the design objectives of Porsche Imaging Architect, In Focus Design.

Distinction and excellence are the main priority when it comes to any project that Stane Industries takes on board. The Trivett Classic Porsche showroom is a fine example of the workmanship that is delivered by the team at Stane Industries, and illustrates the properties of exceptionally conductive alucobond composite panel. Alucobond composite panel is a pre finished panel consisting of a polyethylene core enclosed on either side by two layers of aluminium. The Alucobond Panel product used by Stane Industries, allows cutting edge finishes to be used to create ultra prestigious showrooms or any other application where a dynamic 'wow factor' presentation is needed.

Director, Mr. Stan Kopse, said, "Alucobond makes our projects look ultra modern. For the Trivett Classic showroom, we wanted the building's facade to reflect the quality of Porsche's image, and the quality and beauty of the cars they are selling. We wanted the cars and the building to be in synergy, creating an impressive looking showroom."
