

TRUST FOSROC TO MAKE IT BETTER.

At Fosroc we take safety seriously.

Our Fosroc cement-based powder products are classified as respirable crystalline silica (RCS) hazard free*, meaning workers will not be exposed to hazardous levels of RCS when mixing the powder with water.

Safer products mean a safer workplace for everyone. It's another way Fosroc leads the market.

*Non-hazardous in accordance with Australian Inventory of Industrial Chemicals, contains <math>< 0.1\%</math> RCS.

As a leading manufacturer and supplier to the construction industry across Australia and New Zealand, Fosroc are committed to reducing RCS levels below the hazardous threshold to ensure our products are safer for workers to use.

However, wearing a dust mask is still recommended due to the cementitious powder nature of the product and should only be used in well-ventilated areas to avoid inhaling dust. Always follow the safety directions and wear the recommended PPE requirements as directed on the SDS.
