INNOVATIVE RAPID-ROLLER DOORS

EBS is Australia's leading manufacturer of thermally insulated rapid-roller doors. From their head office and manufacturing facility in Melbourne they supply innovative, energy efficient and cost effective products across Australia and New Zealand through a wide network of representatives.

Founded in 2007, EBS was the first company to introduce an insulated, thermally efficient rapid-roller door to the Australian market. That door, THERMOspeed™, remains their bestselling door but is now complemented by a range of other products including insulated roller shutters and, sectional overhead doors, PVC doors and curtains and garage doors.

The company has recently expanded to loading dock levellers and accessories, enabling them to provide an end-to-end, turnkey solution to reduce operational costs associated with loading, unloading and storage.

EBS products are often used in the food and beverage cold storage industry but also serve other industries such as pharmaceuticals, transport and logistics and food processing.

Precision engineering is a focus of EBS stemming from the fact that the company's two Australian directors lived in Germany for a long time and the technical director is German. EBS doors combine German design and Australian manufacturing, coupled with German-made electronics and motors.

The fact that EBS doors are made in Melbourne was a major advantage during COVID-19 as the company did not face the international shipping and supply chain challenges of some competitors and maintained on-time delivery to customers during the pandemic.

Through their nationwide representative network EBS provided continuous support and maintenance during Australia's lockdowns while always following safety protocols to ensure the safety of their own people and their customers' teams.

EBS is a established and trusted supplier with the ability to deliver cost-effective performance and reliability on the largest projects. For example, recently EBS supplied and installed 170 doors to Australia's largest distribution centre, a 100,000m² facility in Mickleham, Victoria, for German supermarket giant Kaufland.

EBS have a long track record of successful delivery on distribution centre projects. The Metcash Huntingwood Distribution Centre utilises numerous EBS THERMOspeed™ EVO 2 insulated rapid-roll doors and ISOtherm sectional doors to maintain temperatures and preserve the quality of stock while providing easy access and automatic operation.

"I have often commented on how simple and efficient EBS products are to maintain in contrast to other brands," said John Tanti, Metcash Maintenance and Facilities Manager. "Less moving parts equates to cheaper operational costs, straightforward maintenance schedules and a great service team from EBS whether for servicing or emergency repairs."

"I certainly do not hesitate to recommend EBS for any warehousing or egress installations," John said. "Quite simply a fantastic, smartly engineered product at a very reasonable price."

"In terms of energy efficiency, reliability and cost effectiveness, EBS THERMOspeed™ has proven to be one of the best thermally efficient high-speed doors on the market," said Gabor Hilton, Engineering Manager for Oxford Cold Storage.

The increasing global focus on energy efficiency means EBS products are being used to deliver value in more and more applications. An example of this is the Reservoir Aquatic Centre where EBS installed five Isotherm Sectional Overhead Doors as part of a recent energy efficiency upgrade.

"This was a complex project involving retrofitting an old building in close proximity to the pool water," wrote Indy Lingam and Gary McAllister from Darebin City Council. "We are also very impressed with the doors, featuring a high level of insulation, fantastic draught seals and double glazing."

EBS are an innovative and reliable business partner wherever energy efficient, cost effective entrance solutions are required. On all their projects they go the extra mile to exceed expectations and deliver the best solutions to enhance their clients' facilities, and help improve operations.

THE BEAUTY OF STONE

Merit Stone specialises in the design and supply of premium quality imported natural stone products, with factories and quarries in both Europe and Asia.

The company have become a market leader in the Australian natural stone industry and are dedicated to providing the best quality refined stone for their customers.

Natural stone is a fully natural material which creates a fraction of carbon dioxide emissions compared to other building materials and requires very little maintenance. In addition to these sustainability benefits, Merit Stone have also implemented technology to reduce the impact of their quarries on the surrounding environment and wildlife.

Merit Stone caters for both residential and commercial projects. They have established a track record of success on projects large and small in metropolitan Melbourne and can also supply to regional Victoria and interstate depending on demand.

Merit Stone offers a carefully curated collection of materials, colours and products with stock holdings exceeding 50,000m² on two continents and the ability to customise their products to suit any requirements.

Merit Stone's inhouse design experts are able to work with clients to transform their unique designs into reality, with the ability to provide a comprehensive and professional ongoing service including licenced tilers, stonemasons and stone repairs.

Since commencing operations in the Asian market in 2000, Merit Stone has built a strong reputation for supplying the highest quality top-grade stone. In order to maintain customer satisfaction they never compromise on product quality.

The future is bright for Merit Stone with their new headquarters set to open in Hallam, Victoria this year. The new headquarters showcase stone at its greatest potential, demonstrating Merit Stone's commitment to quality and beauty.

With one-stop solutions that are hassle-free, all you need for your project is a Merit Stone.

SERIOUS ABOUT DRAINAGE

Storm Drain Pro is the newest addition to RELN's surface water drainage range.

It is an injection moulded polymer surface water drainage channel, of internal dimensions 150mm wide by 150mm deep, and external dimensions of 202mm wide by 205mm deep.

Featuring a large 150mm profile and two grates to choose from, Storm Drain Pro effectively collects and distributes high levels of surface water. The grates comply with Australian Standards AS3996 and is available in Galvanised Class B and Heel Guard Grate.

Its new galvanised steel edge rails are rated to light commercial traffic, so it is the perfect solution for domestic and light commercial applications. It is also available in convenient, manageable 1m lengths, with an iconic criss-cross design and anti-flotation feet for easy installation.

If required, channels can be cut with a jigsaw or hacksaw to suit your application. There are no additional fittings required, as change of direction can be made by cutting out the side of the channel and connecting it at the integral side flange.

The channel has a tongue and groove assembly joint for each end with side clips to hold the channel firmly connected, eliminating the need for joiners.

Outlet of collected water is via the connection to PVC pipe through a multi size bottom outlet socket. For added security and anti-tamper, the grates also have locking bars available.

Storm Drain Pro is the complete surface water drainage system, whether it be for domestic or light commercial applications, the range is easy to install for your next project.
